

HIGH SPEED INTERNET ACCESS SERVICE

CYBER INTERNET ACCESS NETWORK (CIAN) SOLUTION

Cyber Digital, Inc. offers high-bandwidth, high-availability, robust Internet access services geared towards corporate users demanding broadband access on a full-time, full-service, Internet Protocol (IP) connectivity basis over dedicated end-to-end 100% digital circuits.

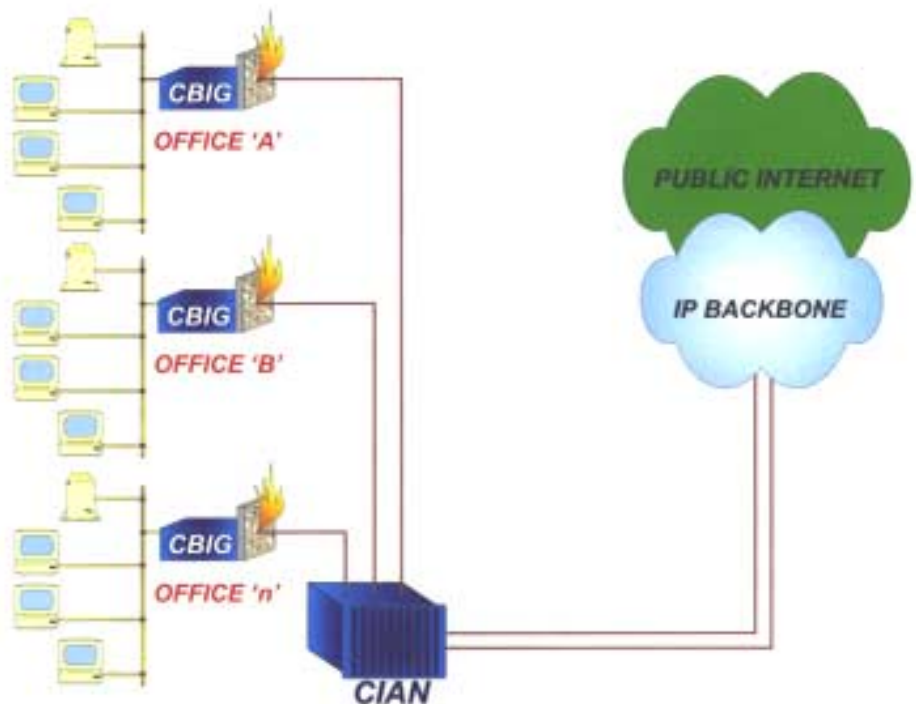

Whether you require large file transfer capability, high-capacity e-mail traffic, or need to host an active web site, Cyber Digital has the access solution for you. The possibilities are endless! Distribute and receive enterprise-wide, inter-networked communications and corporate materials, conduct electronic transactions, access vast information resources all from the convenience of your desktop and with the immediacy of the Internet.

Providing adequate bandwidth for continuous, reliable high-speed 'modem-less' Internet connectivity is our top priority. Speeds range from 64Kbps to 1.544Mbps. Choose the appropriate speed based on the number of users and the amount of traffic you expect to send and receive on the Internet.

CIAN enables businesses to enjoy the convenience of end-to-end IP connectivity, and unsurpassed flexibility, all with the assurance of excellent customer support and the ultimate network performance and reliability. These features make our CIAN solution the premier vehicle for Internet commerce.

Inevitably, e-commerce will define the means of conducting business into the next millennium. Our CIAN advanced hardware/software platform provides the means for you to future-proof your network to ensure that you retain your competitive edge in the new expanding marketplace. The future is a digital broadband world.

CYBER ACCESS PLATFORM

HIGH SPEED INTERNET ACCESS SERVICE

Predictable Pricing

High-speed Internet access providers list their recurring fees based on the purchased bandwidth. Unfortunately, their actual dollar amounts are not that easy to determine. Beware of hidden fees and complex pricing models! Cyber Digital's Predictable Pricing policy eliminates the guesswork.

Flat-rate pricing: No usage charges for always-on connectivity. You can take advantage of your full bandwidth at all times for a single fixed cost, with no price fluctuations. Low one-time installation fee.

No hidden charges: Local Exchange Carrier (LEC) monthly fee waived! No need to interact with TELCO, you receive one bill for all services and line charges.

Guaranteed Lowest Pricing: Our price will be lower than any competitor offering IP frame relay Internet access!

Easy Cost Comparison: Since all you have to pay is a single monthly charge based on your selected bandwidth, it is easy to determine the TOTAL cost of our services. When comparing us to other offerings, please consider:

- *Will I receive another monthly bill from the local Telephone Company?*
- *Do I have to purchase or lease any equipment to receive this service?*
- *Do I have to pay a large installation fee to obtain this service?*

End-to-End Solution & Support

Cyber Digital provides 'hassle-free' connections to the IP backbone. We perform all circuit ordering, on-site cabling and customer premised hardware installation. The equipment and infrastructure remains our property and is therefore entirely our responsibility.

This responsibility begins with your connection to our high-speed Internet access service. We monitor our equipment and facilities remotely 24 hours a day, 7 days a week, 365 days a year.

Our Network Management System informs our technical center immediately upon the detection of potential problems. In most cases, we provide maintenance either over the Internet or over the telephone line. Whenever necessary, our support professionals travel to your building to effect on-site repairs.

Since we retain ownership of our equipment and infrastructure within the building, you will never receive a repair bill. All you have to look forward to is the best connectivity and availability all the time.

Customer Premised Equipment

Cyber Digital's access platform consists of the CIAN switch (usually located in a switch-room) and a Cyber Business Internet Gateway (CBIG) located in each customer's office. Customers connect their LANs to the CBIG via either a PC Network interface Card (NIC) or a network hub for multiple PC connectivity.

The CBIG provides routing, network address translation, IP frame-relay user-network interfacing and Ethernet-to-T1 conversion for transport through the CIAN switch. The CIAN switch provides a full symmetric transit throughput capacity of up to 1.544Mbps per customer line. A symmetric connection operates at the same speed for both transmission and reception.

The CIAN switch provides broadband access to any IP backbone. This means that you can receive Tier 1 class connectivity right to your desktop!

HIGH SPEED INTERNET ACCESS SERVICE

Value-added Benefits

Having a CBIG in your office brings value-added benefits to your network. Perhaps the most important to you is its built-in standard security features and available enhanced security options. Right out of the box, CBIG defends your network by applying IP packet filtering and IP address and port number redirection.

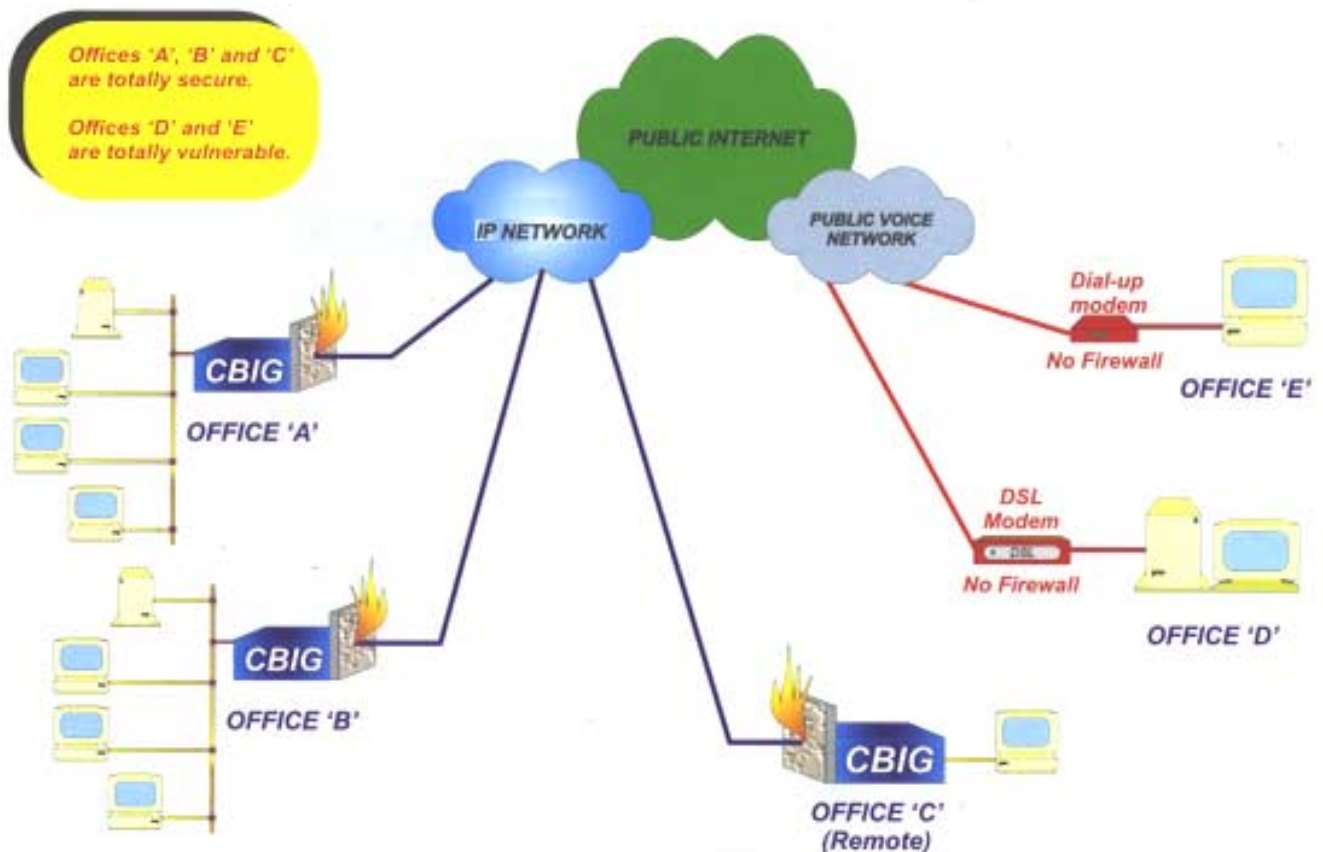

CBIG makes a permit/deny decision for each packet it receives from the public Internet. This limits outside access to your private network based on agreed-upon rules, while allowing unrestricted access from your private network out to the Internet. While this provides basic 'firewall' security, you may want to consider our enhanced firewall security options for critical data protection.

- Enhanced Firewall with IP masquerading
- Ultra-Firewall with proprietary encryption (for VPN application)

In addition, CBIG offers the following options:

- Personal E-mail Service, custom e-mail delivery with automatic message-waiting flags
- IP Tunneling software for Virtual Private Networks (VPN)

CYBER VIRTUAL PRIVATE NETWORK (CVPN)

HIGH SPEED INTERNET ACCESS SERVICE

Cyber Digital Offers End-to-End Management

Our CIAN solution offers the convenience and flexibility of the Internet-without the headaches sometimes associated with managing your Internet connection. You gain the advantage of our complete Internet solution with managed "end-to-end" Internet connectivity at speeds of 64Kbps through 1.5 Mbps, plus additional features and support.

Cyber Digital will provide and maintain full management and operational control of the equipment, significantly lessening your network management burden.

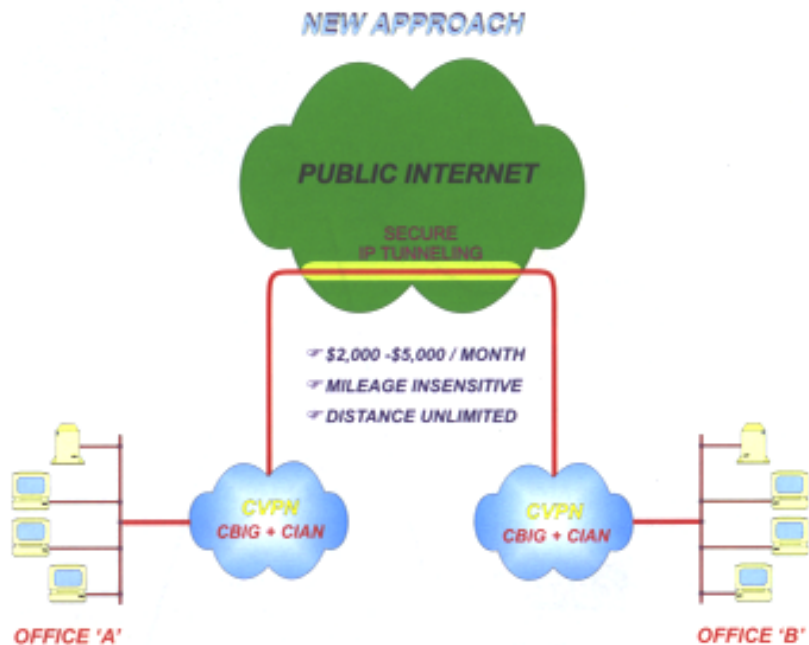

CVPN Service

Until recently, businesses had to choose either to invest heavily in data networks or risk running critical data over the unprotected Internet. Cyber Virtual Private Network Service allows network managers to benefit from the flexibility, multitude of new applications and remarkable savings derived from the public Internet while still enjoying the privacy of a secured data network.

Worry-Free Internet Connections and Management

Cyber Digital can help you conduct business on the Internet with confidence, reliability and flexibility. When you need dedicated access, choose Cyber Digital for your high quality direct connection to the Internet.
